

ABERDARE TECHNICAL COLLEGE

PRACTICAL EXAMINATION

UNIT OF COMPETENCY: COMPUTER SOFTWARE

UNIT CODE: 0619 451 06A

LEVEL: 5

ELEMENT 1: INSTALL COMPUTER SOFTWARE

TIME: 3 HOURS

TOTAL MARKS: 50 MARKS

INSTRUCTIONS TO CANDIDATES

- ✓ *Read all the instructions carefully before starting the practical.*
- ✓ *Perform all the tasks provided in this assessment.*
- ✓ *Use the materials and equipment provided by the institution.*
- ✓ *Use the passwords specified in this examination when creating the user accounts.*
- ✓ *Do not delete or modify important system files.*
- ✓ *Save all required backup files in the specified location.*
- ✓ *Demonstrate completed tasks to the assessor where required.*
- ✓ *Report any hardware or software problem to the assessor.*
- ✓ *Observe safe working practices throughout the practical.*
- ✓ *Ensure that all created accounts and backup files can be verified by the assessor.*

MATERIALS

- *Computer/laptop with Windows operating system.*
- *USB flash disk or external storage device.*
- *Administrator account credentials.*
- *Sample files and folders for backup.*
- *Practical assessment materials and stationery.*

PRACTICAL TASK

You have been assigned a Windows computer that will be used by different users in an organization. You are required to manage local user accounts and perform a backup of important computer data.

Perform all the following tasks.

TASK 1: LOCAL USER ACCOUNTS

1. Open **Computer Management** on the computer provided.
2. Navigate to **Local Users and Groups** → **Users**.
3. Identify the local user accounts available on the computer.
4. Identify the types of at least two user accounts.
5. Explain to the assessor the purpose of using local user accounts.

TASK 2: CREATE AND CONFIGURE LOCAL USER ACCOUNTS

Create the following local user accounts:

Account Name	Account Type	Password
Trainee1	Standard User	0001
ICTAdmin	Administrator	0001
GuestUser	Restricted/Guest-type account	0001

Instructions

1. Create a local user account named **Trainee1**.
2. Set the password for **Trainee1** to **0001**.
3. Configure **Trainee1** as a **Standard User**.
4. Create a local user account named **ICTAdmin**.
5. Set the password for **ICTAdmin** to **0001**.
6. Configure **ICTAdmin** with **Administrator privileges**.
7. Create a local user account named **GuestUser**.
8. Set the password for **GuestUser** to **0001**.
9. Configure **GuestUser** as a restricted account without administrator privileges.
10. Verify that all three accounts have been created and configured correctly.

TASK 3: TEST LOCAL USER ACCOUNT PERMISSIONS

1. Sign in to the computer using the following credentials:

Username: Trainee1

Password: 0001

2. Demonstrate that **Trainee1** operates as a Standard User.
3. Sign out of the computer.
4. Sign in using:

Username: ICTAdmin

Password: 0001

5. Demonstrate that **ICTAdmin** has Administrator privileges.
6. Sign out and sign in using:

Username: GuestUser

Password: 0001

7. Demonstrate that **GuestUser** operates as a restricted account.
8. Explain to the assessor one security advantage of using a Standard User account for normal computer activities.

TASK 4: PERFORM DATA BACKUP

Before computer maintenance is carried out, you are required to create a backup of important files.

A. Prepare Data for Backup

1. Create a folder named **ICT_BACKUP**.
2. Identify at least three important files or folders that require backup.

B. Create the Backup

1. Select the files or folders identified for backup.
2. Back up the selected files to the external storage device provided.
3. Create a destination folder named:

ICT_BACKUP_[YourName]

4. Store the backup files in the destination folder.
5. Ensure that the backup operation is completed successfully.

C. Verify the Backup

1. Open the backup destination.
2. Identify the backed-up files.
3. Open at least one backed-up file to confirm that it can be accessed successfully.
4. Demonstrate the backup to the assessor.
5. Explain two reasons why regular computer software/data backup is important.
