ABERDARE TECHNICAL COLLEGE
CONTINUOUS ASSESSMENT TEST (CAT) 1
UNIT: INSTALL COMPUTER SOFTWARE

date 18/09/2020

UNIT CODE: 0619 451 06A

ELEMENT COVERED: SOFTWARE INSTALLATION

TERM 3

Shirlene Karimi

TIME: 1 HOUR 30 MINUTES

TOTAL MARKS: 50 MARKS

CANDIDATE INSTRUCTIONS

1. Read all questions carefully before beginning the assessment.
2. Answer **all** questions provided in the assessment.
3. Write your answers clearly and in the spaces or answer sheets provided.
4. Observe the marks allocated to each question and provide answers with an appropriate level of detail.
5. Where a question requires examples, provide relevant and technically correct examples.
6. For questions requiring explanations, give clear and concise technical explanations rather than merely listing points.
7. Where a question requires you to distinguish or compare concepts, clearly state the differences between the concepts.

1. Distinguish between **System Software** and **Application Software**, giving two examples of each.
(6 marks)
2. Outline **four** common methods or techniques an IT technician can use to collect software user needs within an organization. (4 marks)

COMPUTER SOFTWARE INSTALLATION

INSTALL COMPUTER SOFTWARE

1. System software is a software that manages and controls the computer's hardware and basic operations while application software performs specific tasks for the user.

Examples of system software

Windows

Linux

Examples of application software

Microsoft word

Excel

2. Interviews

Use of questionnaires

Observation

Holding a meeting with the stake holders

3. Cost

User-friendliness

Security

Reliability

4. Advantages of Off-the-Shelf Commercial

It is usually cheaper

It is available immediately and usually well-tested

Disadvantages

It is less flexible because the originator depends on the vendor for major changes

It may lack some required features

5. The Username

The password can be created or changed

The account type

The profile picture

6. Tech

Technical differences

6) Administrator User account

The administrator has the capability of installing drivers, managing partitions and resetting other users' passwords, while the standard and the guest account doesn't.

Standard User account

The standard user account has the capability of changing their own desktop background, browsing the internet and creating documents and can use installed software while the guest user cannot.

Guest account

The guest user can only web-browse and use pre-installed apps.

7) Identify user requirement - ask the accountants questions to know what they want the software to do.

Software requirements - the technician should know the required things needed.

Cost - the technician must check the budget of the accountant.

Check the security and the reliability of the software.

Compatibility - the software should be checked if it can work well.

i) Agree - Select the software.

ii) Acquisition methods.

Off-the-shelf is a ready made software that is developed for many users.

Be-spoke - is a software developed specifically to meet the requirements of an organization.

5) Senior IT administrator - He/she should use the administrator account because he/she has more tasks.

Receptionist - the receptionist should use a standard user account because all the things he/she can perform normal work without restrictions.

Clients/Interns - they should use the guest account because they need the computer only to browse to the Internet.

6) Security risks - The computer can be attacked by a virus.

Unauthorized access - failing to configure separate user accounts can give access to any unauthorized person.
