

Instructions to candidates:

- ✓ You will be given a working desktop computer, basic tools (screwdriver set, anti-static wrist strap, soft cloth/brush, compressed air), and peripheral devices.
- ✓ Complete each task in order.
- ✓ Call the examiner when instructed to observe a step.

Task 1: Identification of Computer Components and Ports

You are given a desktop computer with the case open, plus a set of labeled peripheral devices/cables.

- ✓ Correctly point to and name 5 components inside the case
- ✓ Correctly identify 5 ports on the rear of the system unit and state one device that connects to each

Task 2: Disassembling and Cleaning Computer Devices

Using the system unit provided, safely open the case and remove **3 components** for cleaning.

- ✓ Wear/use anti-static precaution before touching internal parts
- ✓ Disassemble the 3 named components using correct tools and safe handling
- ✓ Clean the case interior, fan, and removed components appropriately

Task 3: Assembling Computer Hardware Devices

Re-assemble the components removed in Task 2 and reconnect the monitor, keyboard, and mouse to the system unit.

- ✓ Correctly reinstall all 3 internal components in their proper slots/bays
- ✓ Correctly connect monitor, keyboard, and mouse to the appropriate ports
- ✓ Close the case properly and neatly manage cables

Task 4: Booting the Computer

- ✓ Power on the assembled computer and demonstrate booting procedures.
- ✓ Perform a correct **cold boot** and explain what happens during POST
- ✓ Perform a correct **warm boot** using the appropriate method
- ✓ State one difference between cold and warm booting

Task 5: Connecting and Configuring Peripheral Devices

You are given a projector, printer, and one other peripheral . Connect and configure them to the computer.

- ✓ Correctly connect the printer and perform basic configuration
- ✓ Correctly connect the speaker and confirm audio output
- ✓ Correctly connect and configure the third peripheral (e.g., projector display settings)
